

**Question: Describe the impact of network in our daily life.**

Networking is the exchange of information and ideas among people with a common profession or special interest, usually in an informal social setting. Networking often begins with a single point of common ground.

The term computer networking refers to linking multiple devices to share information and software resources in an immediate way.

The fact that the impact of network technology in our daily life is undeniable has inspired scientists to make improvements from time to time through their invented tools and devices for us to use, just to make our lives easier. We always tend to make one step ahead. Technology can help not just with the present but also approximating the future. The following are the impacts of network technology.

**Education**

Technology inside of education is a somewhat problematic premise, an idea that generates controversy from the earliest of primary school grades right through to the top of the academic pyramid, graduate school. Technology can be a powerful tool for learning, and it can be the same for cheating. It can be used to inform, and to distort

**Television and Radio**

Rapid growth of network technology effect the innovation of television and radio broadcasting causing the rapid increase in numbers of programming alternatives such as cable, satellite television, video provided by telephone company fibre lines, satellite radio, video-on-demand, pay-per-view, the Internet, home video and entertainment systems, portable entertainment systems, and the availability of television programs on the Internet and portable digital devices have fragmented television viewing audiences and subjected television broadcast stations to new types of competition.

**Communication**

Modern technology is drastically improve the speed and reduce the time we communicate. An email can be send within a minute. Text messaging allows us to send short messages to each other's phones in seconds. We can reach anyone by telephone almost anywhere with the continued development of network coverage. Instant messaging and video conferencing allow groups of people to speak in real time from all over the country and world.

**Business**

Network technology also is an essential part in business. It affects the way companies communicate and establish relations with their clients. In a fast moving and business environment, it is vital for them to interact with clients regularly and quickly to gain their trust and to obtain customer loyalty.

**Attract and retain customers.**

Networking is a means for a business to tell their story. Networking provides a forum for introducing new services and products, which in turn captures new customers and educates existing ones.

**Convenient resource sharing**

Another major impact of using networks lies in convenient resource sharing where major companies do not want to waste their resources and make sure that they are properly utilized among a shared group of people whereas it lacks independence i.e. the users would become idle if the system or the main file server breaks down.

**Internet**

The Internet changed our life enormously; there is no doubt about that. There are many advantages of the Internet that show you the importance of this new medium. Internet changed our life in many positive ways.

One of the advantages of the internet is that we can create new social contact all around the world which we could not do it easily without the Internet. Such communities can also help people who cannot go out to find friends in the real life because they are disabled.

**Conclusion negative impacts that network contributes are;**

Cybercrimes are a crime that takes place over and due to the presence of the Internet. It takes the form of hacking, theft, fraud, identity stealing and more. Computer viruses and ransomware attacks are some other forms of cybercrimes. Due to large access to the Internet, cyber crimes are rapidly increasing.

Children's development can be damaged by excessive internet use. It affects their development of attention span, memory skills, language acquisition, abilities for critical reasoning, reading, and learning abilities. Besides, using the internet also makes people lazy. For instance, a lot of people prefer playing internet supported mobile games than outdoor sports.
